Empowering lives, Sustaining Futures

At Braining, we are committed to pioneering the future of stroke rehabilitation and intervention through our innovative AI and VR multiplatform. As we strive for excellence in healthcare technology, we also recognize the importance of sustainability and the impact our operations have on the planet. Our sustainability journey is not just a commitment; it's a reflection of our values, transparency, and dedication to a better future.

As CEOs of Braining, we pledge to:

- **Green Operations**: We implement eco-friendly practices in our offices and remote work environments, minimizing waste and promoting recycling.

- **Ethical Sourcing**: Ensuring our sourcing practices align with ethical standards, fostering fair trade and responsible production.

- **Community Engagement**: Actively participating in community service, volunteering, and making charitable contributions to uplift the communities we touch.

- **Transparency**: Outlining our suppliers' sustainability practices and actively supporting them in aligning with our green goals.

- **Supply Chain Audits**: Conducting regular audits to monitor and improve the sustainability performance of our supply chain partners.

- **Employees**: Fostering a culture of sustainability, ensuring every team member is aligned with our ESG targets.

- **Investors**: Demonstrating sound risk management, cost savings, and operational efficiency through sustainable practices.

- **Customers**: Building trust and loyalty by openly sharing our Social Responsibility practices and their positive impact.

Further, innovation is at the heart of our eco-friendly approach. We leverage technology to develop sustainable solutions in our AI and VR applications. With this, we vow to explore the following:

1. **Efficient AI Algorithms:** Our algorithms prioritize energy efficiency, reducing carbon footprint without compromising performance.

2. **Sustainable VR Experiences:** In VR applications, we design immersive environments with a focus on sustainability, ensuring a seamless blend of virtual and real-world responsibility.

3. **Recyclable Materials:** From hardware components to packaging, we prioritize recyclable materials, minimizing waste and promoting a circular economy.

4. **Internal Collaboration:** Our teams collaborate on projects exploring renewable energy and integrating eco-friendly materials, infusing sustainability into every facet of our operations.

We are dedicated to ongoing assessment and enhancement of our sustainability efforts, ensuring they evolve with our company and global needs. As such, we encourage every member of the Braining family to join us in this vital journey towards a greener footprint. Together, we can make a significant difference, not just in the lives of stroke survivors, but also in the health of our planet.

The CEOs,

João Ribeiro & Nuno Almeida
